Design, development and manufacturing of the airbag systems is conducted by HELITE in Dijon, France. Every single airbag and trigger system is carefully tested and quality controlled.

Made in France

Reliability

• 100% Mechanical airbag system, easy to install, ready to use, works with any motorcycle >> No unexpected deployment, works for the driver and/or the passenger.

Simple and practical

• Reusable >> Replace the CO2 cartridge to reactivate your airbag on your own in less than one minute
• Versatile and discreet >> fits over any other equipment or fully integrated in our all-in-one motorcycle jackets

Helite Motorcycle

»Safety doesn’t happen by accident«
Helite is a French company founded in 2002 that has been developing wearable airbag systems. The concept behind the company is:

"As little compromise as possible, as much technology as possible «

Reducing injuries thanks to:
- Innovative airbag shape >> Stabilization of the head, neck and spine to avoid whiplash injuries and hyper-extension
- Airbag volume: 17 – 24 litres of protection (depends on the airbag size)
- Inflation time very quick under 100 ms >> to inflate a large volume with an optimal pressure in the airbag chambers

What is the TURTLE Technology?
The Turtle Technology principle is similar to a helmet: hard shell outside, soft material inside. This innovation is a very big protection improvement for the back. The results of absorption and distribution of shocks is considerably higher and it protects from intruding objects.

Body parts protected
Directly:
- Neck
- Spine
- Chest and ribs
- Pelvis

Indirectly:
- Head
- Liver
- Heart
- Lungs
- Pancreas
- Collarbone
